TEST BOX for ELREC Pro IP RECEIVER

This test box is not a calibration unit, but a test unit which aims at checking the good operation of an ELREC Pro receiver. It allows to control the **Rs Check function** and the **measuring function** of an ELREC Pro for each channel.

More precisely, this test box is useful to validate the proper functioning of the internal **CPU board** of an ELREC Pro.

Main features

- Very fast and easy to use
- 11 numerated wires to measure the 10 reception channels of the ELREC Pro
- Set of internal resistances
- Power supplied by four 1.5V cells

Controlled parameters

- Rs Check Values (kOhm)
- Resistivity values (Ohm.m)
- Reception voltage values (mV)
- Chargeability values (mV/V)
- Quality factor (standard deviation in %)
